Ahmad Aghazadeh

Software Engineer @ Bet Technology | Developing Scalable Microservices
Tabriz, East Azerbaijan Province, Iran

Summary

I’m a Senior Software Engineer with over 14 years of experience building backend services and full-stack applications, primarily using C# and .NET.My focus is on scalable, maintainable software: microservices, distributed systems, REST APIs and event-driven architectures. I work with Clean Architecture, TDD, DDD and CQRS, alongside technologies including SQL Server, PostgreSQL, Redis, RabbitMQ, Azure Service Bus, Docker and Kubernetes.I enjoy turning complex requirements into practical technical designs, improving reliability and mentoring developers.I’m also familiar with agentic engineering and interested in how AI can support software development. As an active Stack Overflow contributor with over 17K reputation, I value continuous learning and sharing knowledge.I’m open to senior software and backend engineering opportunities in Europe, including roles offering relocation and visa sponsorship.

Experience

Bet Technology
Software Engineer
May 2025 - Present (1 year 6 months)
Sydney, Australia (Remote From Iran)

• Redesigned the feed reader using Azure Service Fabric and the Actor model for improved scalability.
• Developed microservices architecture with Service Fabric, focusing on high availability.
• Implemented TDD across the bet feed system, ensuring code quality.
• Designed event-driven architecture using Azure Service Bus for real-time bet feed processing.
• Implemented Cosmos DB for real-time betting data processing and consistency.

Specific-Group Austria
Software Engineer

May 2024 - April 2025 (1 year)
Vienna, Austria (Remote From Iran)

• Built a restaurant app suite with 5 apps, integrating RESTful APIs via OpenAPI and using Stripe and Twilio.
• Led ISP software development and digital transformation with .NET Core, PostgreSQL, and improving performance by 7%.
• Developed and optimized Microservices architecture, CQRS, improving system scalability and performance.
• Established TDD, boosting code coverage and cutting deployment errors by 8%, while ensuring proper architecture with tests.
• Deployed OpenTelemetry and Prometheus for tracking and monitoring, reducing ISP application crashes by 6%.

Bulut

Software Engineer

July 2022 - May 2024 (1 year 11 months)
Tabriz, East Azerbaijan Province, Iran

• Maintained communication with the UI/UX team on Figma to achieve an outstanding user experience
• Using CI/CD Pipeline for publishing the Shipping and Delivering API
• Implementation of tracking and monitoring for the Shipping and Delivering application with ELK
• Designed eventual consistency for Shipping and Delivering with communicate API with Sale API using messaging, cache server, and contract test.
• Develop and maintain a central Auth token-based authentication service, using Android Application and Web API

Shoniz

11 years 7 months

Software Engineer

February 2018 - July 2022 (4 years 6 months)
Tabriz, East Azerbaijan Province, Iran

• Develop and maintain a central Auth token-based authentication service, using Android Application and Web API
• Designed and launched Market Research application
• Successfully delivered 5 Web API and RESTFul APIs to support 3 million requests monthly
• Implementation of Real-Time Ordering web application by using MVC, React, HTML, and CSS to create an innovative dashboard for the supervisor

• Supervised a team of 3 developers to develop a Market Research API with Clean Code, SOLID, and Unit Testing, resulting in a 10%

Software Engineer & Android Developer

January 2011 - January 2018 (7 years 1 month)

Tabriz, East Azerbaijan Province, Iran

• Redesigned and optimized Real-Time Ordering and Market Research apps, boosting performance and user experience.
• Migrated Android apps to Jetpack Compose and Coil; integrated coroutine, LiveData, and Flow to improve responsiveness and reduce crashes.
• Implemented Firebase A/B testing, increasing mobile orders by 5%, and automation tests, cutting Crashlytics bugs by 24%.
• Led a team of 3 using Clean Architecture and MVVM, driving a 10% sales increase.
• Built secure identity/auth services and delivered scalable REST/gRPC APIs supporting 3M+ monthly requests.
• Refactored backend from Dapper to EF Core; developed a real-time dashboard with ASP.NET MVC and JavaScript.
• Launched full-stack Market Research apps using Kotlin (Android) and C# with EF Core and SQL Server.

Education

University of Applied Science and Technology

Bachelor of Engineering - BE, Software Engineering Technology · (February 2006 - July 2008)

University of Applied Science and Technology

Associate's degree, Computer Software Engineering · (February 2004 - February 2006)
